To be filled by team

FORMULA 1 Race Intelligence Dashboard Analysis Report

Customer Journey Map

Journey phase	Stage 1: Discover Data	Stage 2: Explore Dashboard	Stage 3: Use Insights
Actions **What does the customer do?**	Identify questions about F1 race data. Select seasons, drivers and teams. Review the available dataset.	Open the Tableau dashboard. Apply filters and compare charts. Explore KPIs and leaderboards.	Interpret points, podiums and DNFs. Compare tyre and circuit patterns. Prepare or share findings.
Touchpoints **What part of the service do they interact with?**	Dataset file and project report. Race records and data fields.	Tableau dashboard, filters, leaderboards and visualizations.	Charts, summaries, exported views and presentation materials.
Customer thought **What is the customer thinking?**	Is the data complete and relevant to the question I need to answer?	Can I quickly compare drivers, teams and seasons?	What conclusions or actions are supported by these patterns?
Customer feeling **What is the customer feeling?**	Curious, but may be uncertain about data quality.	Engaged; could feel frustrated if charts or filters are unclear.	Confident when findings are clear and easy to communicate.
Process ownership **Who is in the lead on this?**	Data analyst / project team prepares and validates the data.	Dashboard developer maintains Tableau views, metrics and filters.	Strategist, journalist or technical analyst interprets results.
Opportunities **How can we improve this stage?**	Add data-quality checks and a clear data dictionary.	Use consistent labels, readable charts and intuitive filters.	Provide metric definitions, season context and exportable summaries.

Process Ownership			

Additional implementation notes

Process ownership

Data analyst: validate source records and definitions.

Tableau developer: maintain calculations, filters and dashboard performance.

Stakeholders: interpret and communicate insights for their use cases.

Improvement opportunities

Add data-quality checks and document metric definitions.

Keep chart titles, labels and colour conventions consistent.

Provide clear filters, season context and exportable summaries.
